OUR VISION

move37

Digital processes will shape our world in the years to come. We want to make sure they **change the way we think about work**. With our pension plans we are in the business of securing futures, so we can't help but think ahead.

It's time to change the game.

We believe in a digital **future**,
in changing the way we **work**,
in a new way **forward**.

Redesigning our internal ticket system for our customers' pension plans, is our first step towards move 37 – a first step towards a future where our work is truly enabled by the tools we use. Our goal is to push the boundaries of human interaction through collaboration. It means not replacing people with technology, but using it to allow them to thrive. With this concept it is our mission to move one step closer to connecting people in a digital future and enabling fully digital workflows where we never thought it would be possible.

Collaboratively shaping our future

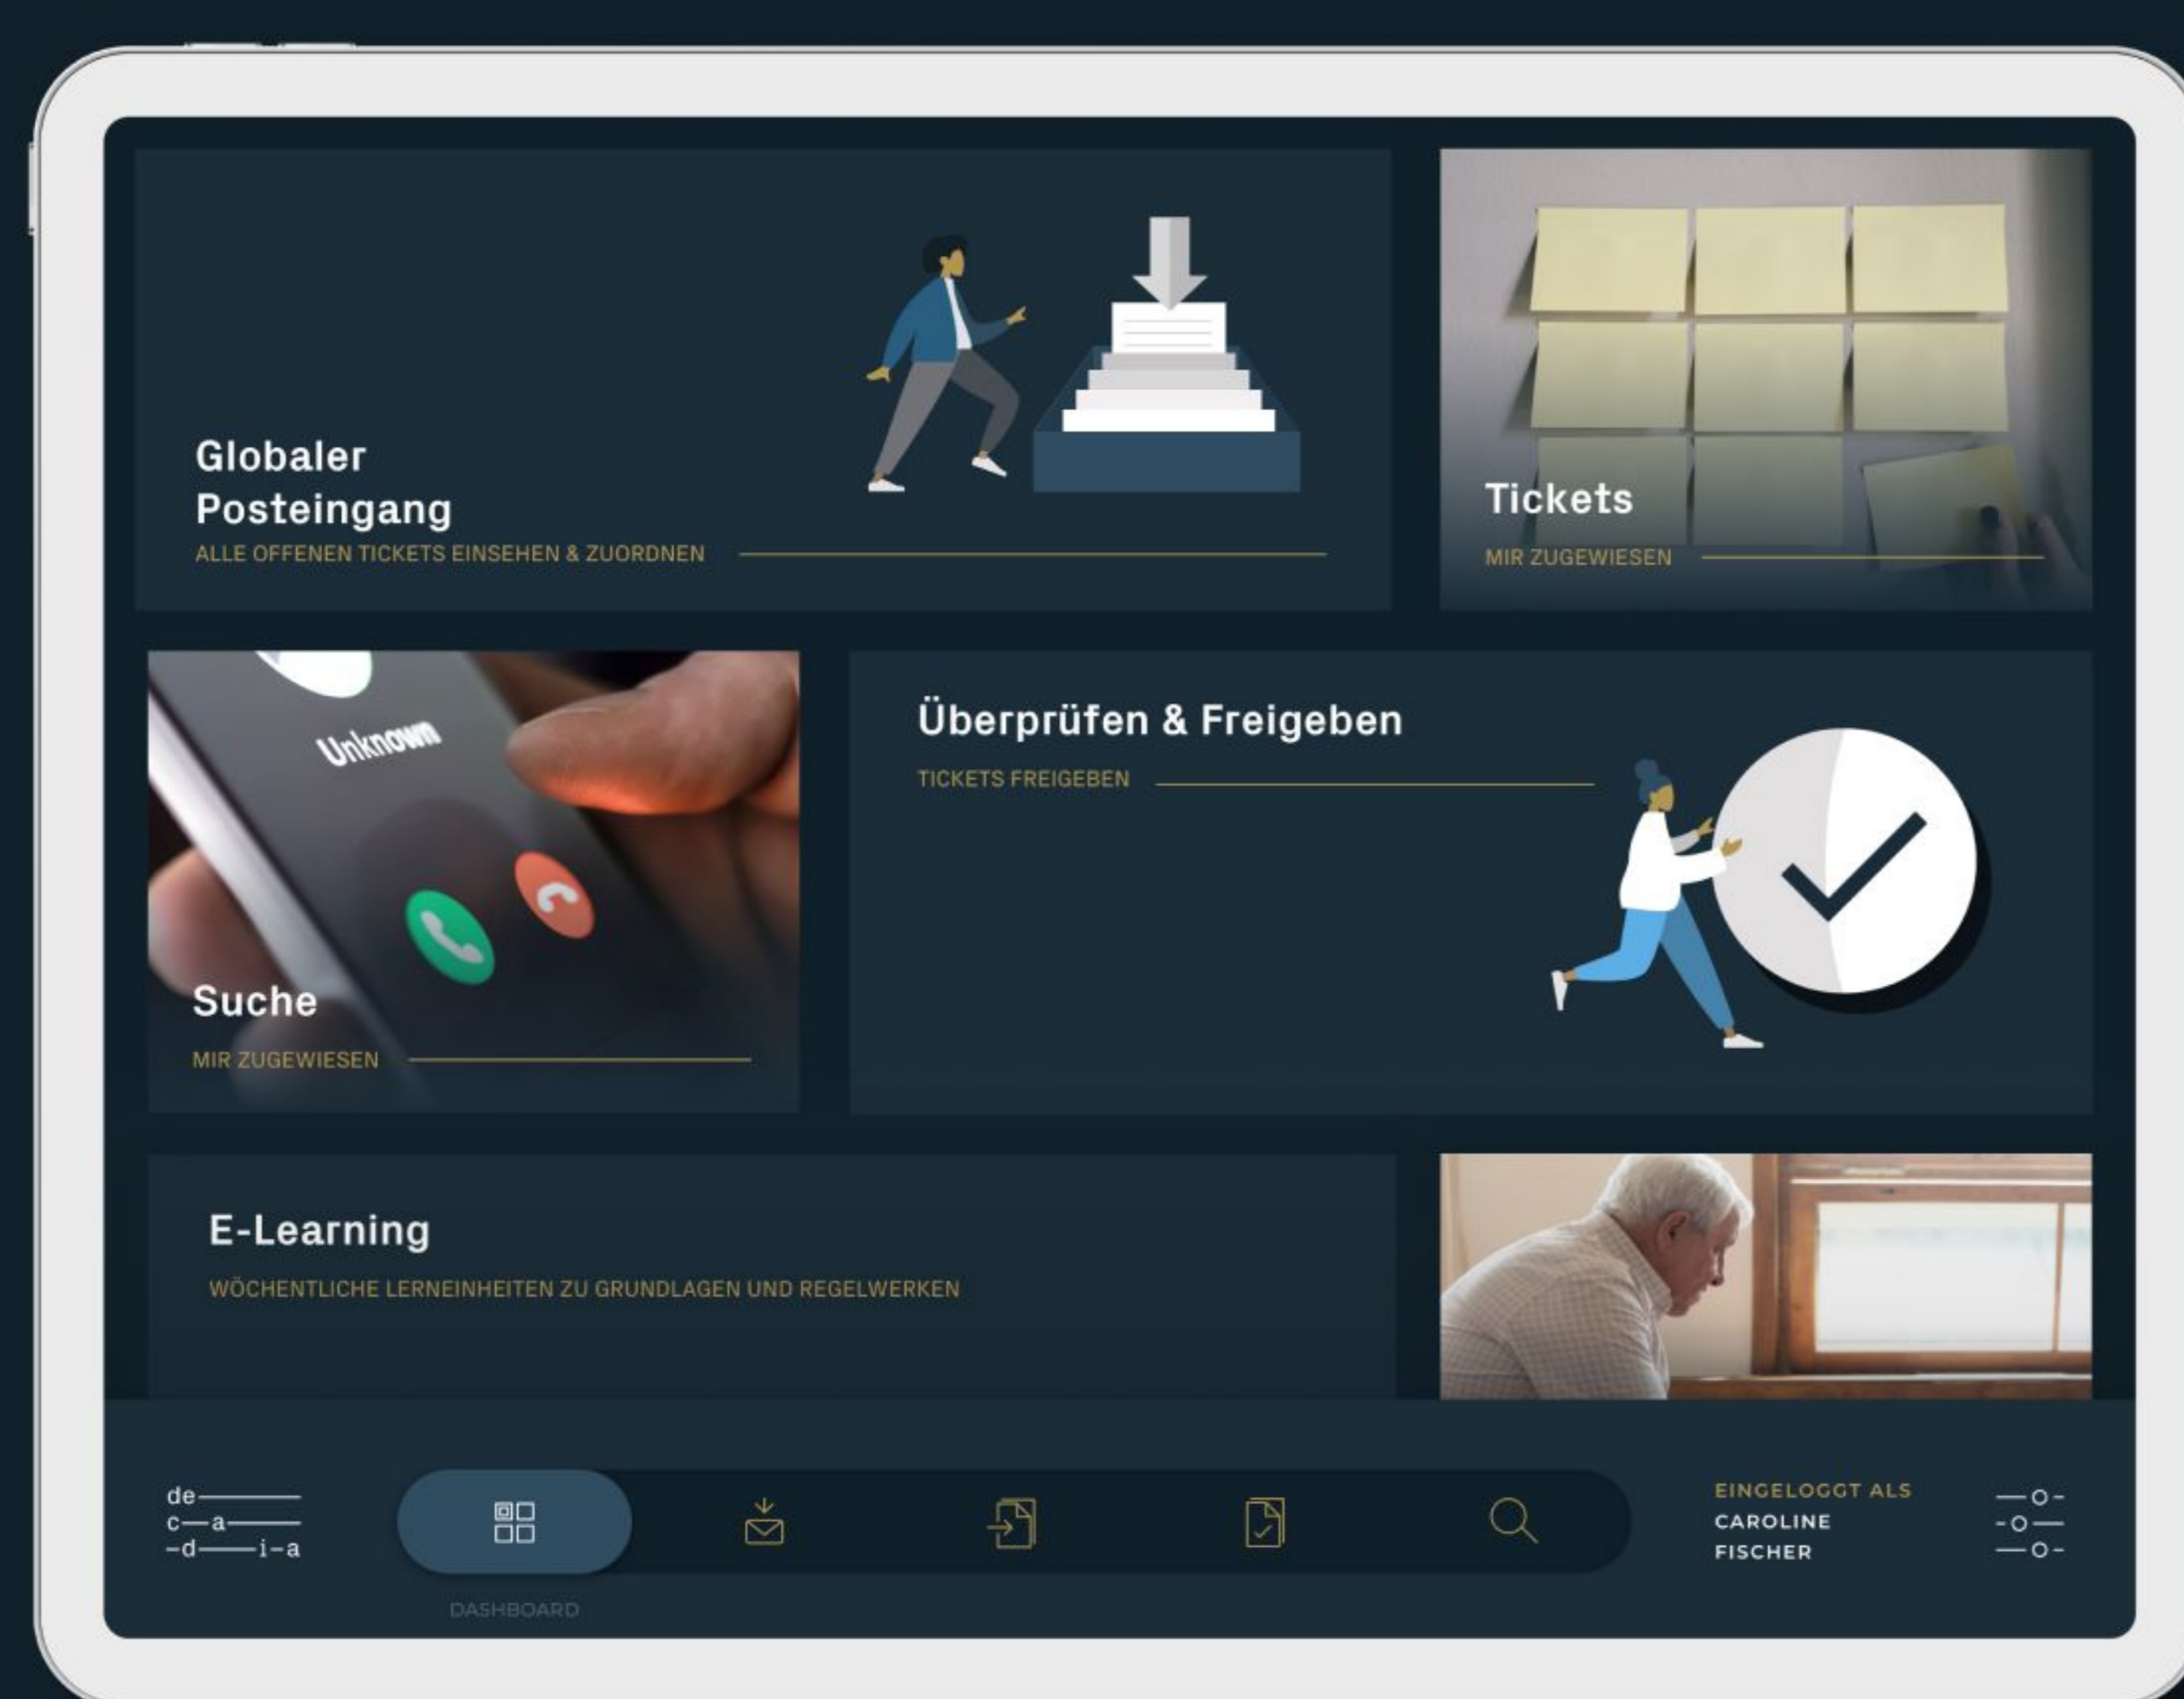

In a famous game of Go between man and machine, move 37 was the one where it became clear that the artificial intelligence AlphaGo was more than a calculation of probability, it displayed creativity. This single move opened doors to previously unimaginable ways of collaboration between humans and AI.

Move 37 for us, stands for the collaboration that results from the triad of artificial intelligence, connected services, and most importantly human interaction. We see a future where this triad redefines the way we work.

Give employees a truly intuitive user experience

TICKET SYSTEM

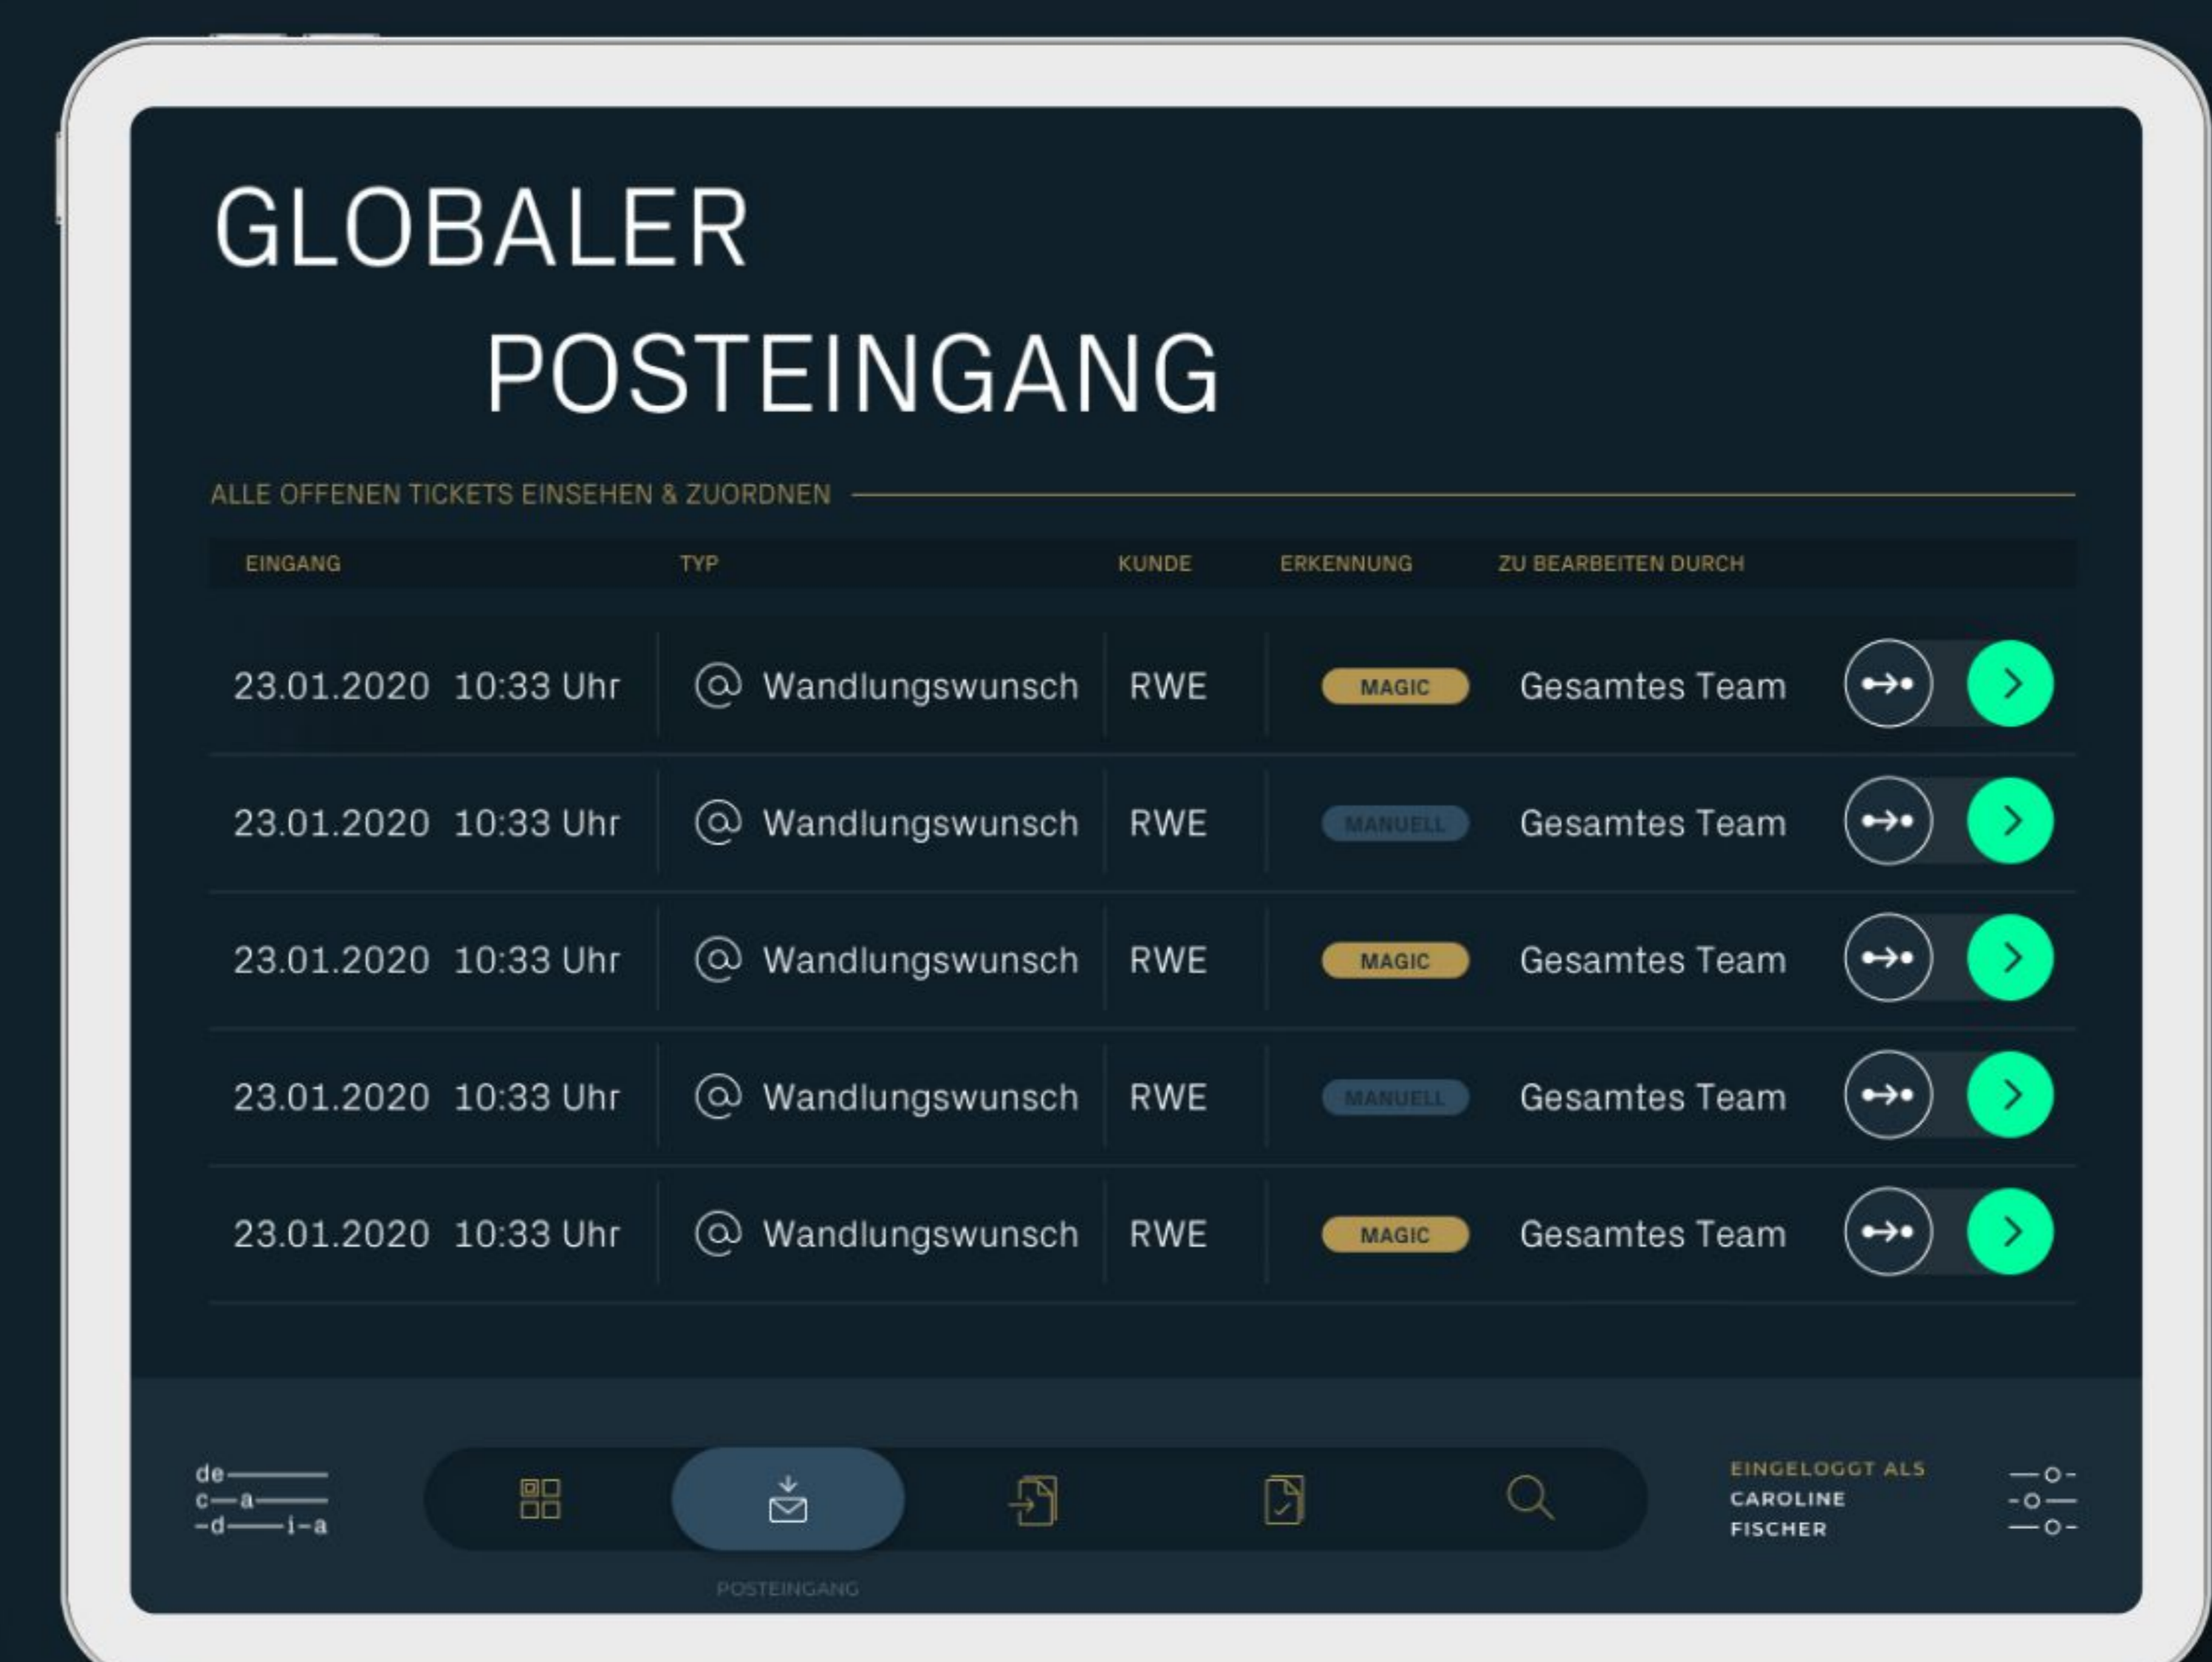

Collaborative Inbox

Uniting teams that sit apart will be one of the many challenges businesses face in the future. So why not solve it now? The collaborative inbox allows for shared responsibility with transparent accountability towards the rest of the team. Agile workflows allow for highly efficient and structured teamwork while promoting creative solutions and efficient collaboration.

DASHBOARD

Machine Learning

The days of learning how to use an interface are over. Machine learning enables the ticket system to turn the relationship between software and its user upside down. The modular interface learns how you like to work and makes intelligent suggestions based on your own workflow.

DATA HANDLING

Magic Letter

The magic letter system allows for the seamless integration of paperwork into the digital workflow. AI assisted scanning allows for effortless transfer of information from offline sources like signed letters into one centralised data system - the central point of truth. This is not only essential for establishing the foundation of a system that enables collaboration but allows employees to refocus their time on what really demands their skills.

Ready for a new way of working.

TABLET, LAPTOP OR DESKTOP

Optimised for your favourite device

Connectivity is inherently linked to portability. That's why Move 37 emphasises the importance of a decentralised workflow, which we believe is the basis of bringing people together in the future. Our processes of collaboration are shaped around communicating seamlessly when apart and collaborating effortlessly when together. How? By placing ergonomic and adaptable interface design at the forefront of the development process.

ACCOUNTABILITY

Promoting transparent collaboration

Accountability is the centrepiece of agile workflows, and therefore is the currency in modern-day teams. With transparent responsibilities organisational meetings become a thing of the past. Move 37 refocuses time spent collaborating on solving problems, not delegating tasks, because that can be done with a single swipe once responsibilities are clearly defined.

The most comprehensive interface ever: Your LifeLine.

YOUR LIFELINE

A view into the present, past, and future

The LifeLine provides a look into every action taken in the past and coming up in the future. From scanned documents to scheduled phone calls, every action in an account can be expanded for further details, to provide information when it is needed most. This results in transparency for the user as well as the customer. We are in the business of securing futures and people place their trust in us to do so, because of the ability to anticipate their future in detail.
